Highly skilled Front-End Developer with a solid foundation in web development principles and technologies. Proficient in HTML5, CSS3, JavaScript, and front-end frameworks such as React. Adept at collaborating with cross-functional teams to deliver high-quality projects that meet client requirements. Strong problem-solving abilities and a keen eye for detail, combined with a passion for creating intuitive and visually appealing interfaces. Continuously staying updated with industry trends and emerging technologies to drive innovation and enhance user experiences.

Professional Front-End and Back-End Automation Engineer in Quality Assurance. Extremely experienced in both Manual and Automation testing of software applications.

Skills

Front-End Development: HTML, CSS, JavaScript

Languages and Frameworks: Java, Java Script, SQL, HTML

Unit testing Frameworks: TTD, DDT, BDD, TestNG, JUnit4

Continuous Integration : Azure DevOps

Defect Tracking and Project Management tool: Jira, Azure DevOps

RDBMS: SQL management studio

Repository System: Git, Azure DevOps

Testing and Build tools : SoupUI, Selenium, Selenium WebDriver, Cucumber, Postman, Maven. Methodologies: Agile/Scrum, Waterfall

Web Frameworks: React

Responsive Design: Media queries, Flexbox, CSS Grid

UX/UI Principles and Design Collaboration

Work History

Software Test Engineer

2020-01 -
Current

UsaBlueBook , Waukegan, IL

- Collaborated with the development team to create and maintain responsive websites using HTML, CSS, and JavaScript.
- Utilized front-end frameworks like React to create interactive and dynamic components, improving user engagement and experience.
- Implemented front-end functionalities, optimized website performance, and ensured cross-browser compatibility.
- Conducted thorough testing and debugging to identify and resolve issues, ensuring a seamless user experience.
- Utilized responsive design techniques to optimize user experiences across various devices and screen sizes.
- Conducted rigorous testing and debugging to identify and resolve issues, ensuring high-quality deliverables.
- Collaborated with team members on project planning, prioritization, and task assignments.
- Created **requirements** for milestones and monitored completion of tasks for QA team.
- **Recommended software solutions such as automated test tools** to improve test processes to meet business strategies.
- Established new and improved QA processes by developing **test processes**, test cases and assigning and executing tests.
- Designed and implemented automated testing frameworks using Selenide, Java, and BDD, resulting in a significant reduction in testing time and improved product quality.
- Extended **DDT framework** and implemented re-usable methods across the application.
- Performed **API testing** by using **SoupUI/Rest Assured**
- Established connection between database and **Java** using **JDBC**.
- Created and utilized Azure CI/CD to integrate automated tests into the build process for continuous testing and feedback.
- Automated all types of testing: Web, Mobile, Performance Testing.

2017-09 -
2019-11

Senior Quality Assurance Automation Engineer

Northern Trust, Chicago, IL

Roles and Responsibilities:.

- Responsible for creating test **automation scripts** with **Selenium WebDriver** with help of **JAVA**.
- Executed manual and **automated test cases** and **managed defects** in **JIRA**.
- Followed **BDD with Cucumber** by creating **feature files** with **scenario** and **scenario outlines** as user behaviors.
- Executed **Regression testing** at the end of the sprint to ensure the overall quality of the product.
- Extended **Data driven framework** and implemented re-usable methods across the application.
- Performed **parameterization** of the automated **test scripts** in **Selenium WebDriver** to check how the application performs against multiple set of data.
- Developed **automation test scripts** with **Selenium WebDriver ,Java, TestNG**.

- Created a reusable **framework** using **Maven** as the build automation tool for dependency management.
- Used **Jenkins** for continuous interaction of **Smoke suit** and sending email updates to the team.
- Obtained data from **database** by writing **queries with SQL**.
- Performed **API testing manually using Postman** and automated those tests using **RestAssured library**.
- Hands on experience with working command line and goos knowledge of **basic Linux commands**.
